

*Silicon Valley Energy Watch,
Solar America City of San Jose, The IBEW Local #332 &
The "Nobody Gets Left Behind" Training Group presents:*

“SOLAR PHOTOVOLTAIC SAFETY FOR FIREFIGHTERS”

A one-day seminar for firefighters to give you the tools to identify the components of a PV System, what can hurt you, and what is safe. With voltages up to 600 VDC, knowing what to touch and not touch is KEY. You will learn the difference between solar electric, solar thermal, safe shutdown procedures, and several case studies. The afternoon session will include a walk-through of a 660KW commercial system.

August, 5th or 6th 2009 in San Jose, California

10:00am to 3:00pm Lunch Included

IBEW Local 332, 2125 Canoas Garden #100, San José

INSTRUCTOR BIO:

Fire Engineer Matthew Paiss has been a with the San Jose Fire Department for 13 years. He has degrees in Solar Technology and Fire Science, is a member of the California State Fire Marshals' PV Task Force, has written articles in both Fire Engineering and Home Power magazines, and teaches PV Safety classes for the fire service. Matt also has a PV system on his own home.

REGISTRATION:

The seminar is **FREE** and space is limited to 50 participants, so register immediately! To register, please call Lyleen Dauz at (408) 975-2605 or email lyleen.ramos@sanjoseca.gov with your name and the date of seminar you would like to attend.
